

## 1 ABSTRACT OF DISCLOSURE

2 A system of two separate panels of computer keyboard for reducing the motions and  
3 promoting the ergonomic posture of the shoulders and upper arms of a computer-keyboard  
4 user. A first independent keyboard panel comprises all keys bearing all numerics, alphabets,  
5 words, symbols, signs and functions to the left of and including keys 5, T, G, B. A second  
6 independent keyboard panel comprises all keys bearing all numerics, alphabets, words,  
7 symbols, signs and functions to the right of and including keys 6, Y, H, N. A camera and a  
8 support base comprises a mold for the hand-wrist-forearm and various types of sensors are  
9 incorporated into the panel to minimize the unnecessary movements and effect the ergonomic  
10 posture of the limb and shoulder.
